2 סעיף

- 1. {f:[T1->T2], x: T1} |- (f x)}: T2
  - נכון ידוע שכאשר פונקציה מקבלת ארגומנט מסוג T1 היא מחזירה ארגומנט מסוג T2, הפעלנו את f על x כאשר נתון כי x מסוג T1 ולכן נקבל ארגומנט מסוג T2
- 2. {f:[T1->T2],g: [T2->T3]}, x: T2}|- (f g x): T3
   2 מקבלת רק ארגומנט אחד ואילו בדוגמת הרצה f מקבלת מכיוון ש f מקבלת רק ארגומנט אחד ואילו בדוגמת הרצה f ארגומנט g ו-x- g.
- 3. {f:[T2->T1],g: [T1->T2], x: T1}|- (f (g x)): T1 נכון - נשים לב כי g מקבלת ארגומנט מסוג T1 ומחזירה ארגומנט מסוג T2 ולכן כאשר נפעיל את g על x שהוא מסוג T1 נקבל ארגומנט מסוג T2 לאחר מכן בהפעלת f על הארגומנט שהתקבל מסוג T2 נקבל ארגומנט מסוג T1, ולכן ההרצה תקינה.
- 4. {f:[T2->Number],, x: Number}|- (f x x): Number
   לא נכון מכיוון ש f מוגדרת כפונקציה שמקבלת רק ארגומנט אחד ואילו בדוגמת r ארגומנט (בדוגמת x ארגומנט x הרצה f)

3 סעיף

- 1. cons {cons:[T1\*T2] -> Pair(T1, T2)}
- 2. car {car:Pair(T1, T2) -> T1}
- 3. cdr
  {cdr:Pair(T1, T2) -> T2}

4 סעיף

(Define f (lambda (x) (values x x x))) {f:[T1] -> (Tuple T1\*T1\*T1)}

- 1. T1, T2 {T1 = T2}
- Number , Number { Empty Substitution }
- 3. [T1\*[T1->T2]->Number], [[T3->Number]\*[T4->Number]->Number] { T1 = T4 = [T3 -> Number], T2 = Number }
- 4. [T1->T1], [T1->[Number->Number] { T1 = [Number -> Number]}

#### חלק 2:

#### 14 חלק

היתרון של Promise על Callback הוא ש Promise מספק הצגת קוד קריאה ונקייה Calch ו-catch ו-catch, בעוד אותו יותר, נותן תחושה של קוד סינכרוני בכך שמשרשרים את ה Callback יהיה מעין פירמידה מסועפת.
